Bachelor level graduated may 2015

Business Management

Specialization: Team leadership

Thesis: "Time management"

COVER LETTER

JUNIOR SOFTWARE TESTER

I graduated from the Wroclaw University of Economics where I gained knowledge in the field of Economics, Finance, Management, and **IT Science**. I am participating in **Software Development Academy** currently. During my studies at the beginning of my career, I started work in the Insurance Industry. Then for over 4 years, I explored the marketing and communication secrets of the largest festival brands in Wroclaw (European Capital of Culture 2016, The World Games 2017). For the last two holiday seasons, I worked in the United States where I experienced how work functions in a culturally different view. I packed my baggage of experience and I start a new career path which I am fascinated with — it is a **New Technology Industry**. I would like to go deeper into **Quality Assurance** and complexity connected with the **testing** in **Software Development**. This is my objective where I constantly follow and focus. I am a positive person, sociable with lots of energy and ideas, open for new knowledge and quite obsessive about that point. This is one of more reasons why I choose IT because knowledge here is endless and constantly expands. Besides, I am characterized by patience, accuracy, and detail-oriented ("pick holes in smth"). I believe that there are always bugs that can be found! If you give me a chance I will try my best to show my skills and good value in the process of recruitment in your company.
